PATIENT COUNSELLING

Patient counselling is a wide term which portrays the interaction through which medical care experts endeavour to expand patient information on medical services issues. Patient guiding might be verbal or composed performed on an individual premise or in gatherings and give straight forwardly to the patient or parental figure. The interaction accommodates the trading of data between the patient and wellbeing expert. Those data accumulated is expected to survey the patient's ailment to additional plan, select, execute, assess and adjust wellbeing interactions. The outcome of the Patient perceives the significance of their prosperity. It urges the patient to build up a functioning relationship with a drug specialist and establishment of nonstop collaboration and interview. Improves the adapting procedures to manage prescription results and medication collaborations. Motivates the patient to take medications for development of his/her wellbeing status. The patient turns into an educated, Proficient and Dynamic member in infection treatment and self-consideration the executives.

CASE STUDIES

Subjective evidence

Subjective:

Demographic Details:
Name : ABC IP no: 2107025352
Age : 75year Dept: cardiology
Sex : male DOB : 19-07-2021 1:40am
DOD :

Reason for Admission:
A 75year male patient
A male patient of 75year old was presented to the ER with chief complaints of fall down at home around 11pm, bleeding from mouth +, passing urine involuntary, trembling of both hands +, tongue bite +, generalized weakness, urinary incontinence - 1hr prior to admission in ER.

History of Past illness:
K/C/O HTN H/o on-off giddiness
CAD-RBBB fall since 2-3years
H/o - S/P - cervical spine surgery
H/o - BPH with PVR (post void residual)

Family History:
No significant family history

Physical Exam:

Systemic Examination:
Sensitium: awake/oriented
RS: BAC+
CVS: S1S2+
HA: Soft
CNS: GCS: E4V5M6
— Right Tongue bite +
pupils: N7RL

General examination:
Temp: 98.6°F
PR: 88/min
BP: 140/80mmHg
RR: 20/min
SpO2: 98%

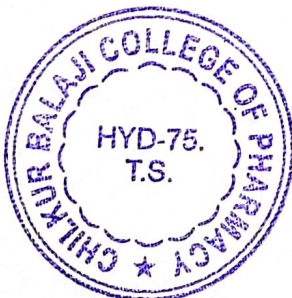

Observations:

Laboratory Data:

	19/07/21	20/7/21	Normal values
Hb%.	10.9g/dl	11.7g/dl	13.5-17.5g/dl
PCV	30.7%	32.6%	40-54%
Total count	3320	4000	
Platelets	75000	80000	
Creatinine	0.9mg/dl		0.7-1.2mg/dl
Na+	140mmol/L		136-146mmol/L
K+	4.0mmol/L		3.5-5.0mmol/L
U	10.7mmol/L		10.2-10.9mmol/L

Other Investigations:
MRI Brain with stroke protocol, RP-2, EEG, EEG, 2D Echo
cardio doppler, Dengue serology, vitamin-B12

Investigation report:
MRI brain - no evidence of acute infarct, multiple periventricular white matter changes
serological chylida -ve
Dengue serology -ve
vit B12 - vit B12 deficiency

Provisional Diagnosis:
Sciurus / cervical lumbar spondylitis
Acute infant
Thrombophlebitis

Treatment chart:

Day-wise Assessment:

Day-1:
H/O - CAD-RBBB previously detected (year back - on ecupirin "deterioration")
HR - 82/min
BP - 140/80 mmHg
SPO₂ - 98%
ACS - 15/15
→ Dose of ecupirin is reduced to 75mg in view of low platelets i.e 75,000
→ No fever, headache / vomiting
→ Back clo - Backpain ⊕

Day-2:
occasional cough
c/o non productive cough

Day-wise assessment:

Day-1: c/o Backpain ⊕
Treatment: Tab. Ecupirin AV 75mg
Tab. Flexura-O - 1Tab

Day-2: c/o - occasional cough, non productive cough, constipation
Treatment: Sup. Aiscoryl 10ml, Syrup. Duphalac, Karval plus - 1cap

Assessment:
Based on subjective & objective evidence it is assessed that patient is suffering from generalized tonic-clonic seizure

Final Diagnosis:
Sciurus claudon - generalized tonic-clonic seizure
Vit B deficiency - due to bicyclopain
Thrombophlebitis

Treatment chart: (inpatient medication chart)

HYDERABAD - 500 075.

Drug comment:

- 1- Inj. PAN** - pantoprazole class: proton pump inhibitor
MOA: It works by reducing the stomach acid by blocking the action of an enzyme (H⁺/K⁺ ATPase (or) gastric proton pump)
ADR: headache, dizziness, stomach pain, gas, nausea, diarrhea
- 2- Tab. Escoplin AV** - 75mg Generic name: Aspirin
class: anti-inflammatory & blood thinning/antiplatelet agent
MOA: It works by reducing the formation of cholesterol & inhibiting the formation of blood clots & thereby preventing heart attack & stroke
ADR: bleeding (stomach bleeding, GI bleeding, nosebleeds), rash, diarrhea, stomach ulcer, renal disease, abdominal pain.
- 3- Tab. Levipit** - 50mg
Generic name: Levofloxacin
class: anti-infective
MOA: It works by suppressing specific branched amino acids to bacterial activity & prevents the spread of electrical signals that cause bacteria.
ADR: Strep throat, diarrhea, fatigue, headache, dizziness, behavioral changes, aggressive behavior.

- 4- Tab. Dapiflu** - 10mg
class: diuretic
Generic name: spironolactone
MOA: It acts by inhibiting Na⁺ & Cl⁻ reabsorption in urine and eliminates excess salt & water by increasing the amount of urine production.
ADR: dehydration, tingling, & mineral in blood, ↑ blood potassium & calcium.

- 5- Cap. Doximax** - 1 cap
class: alpha- adrenergic antagonist
Generic name: Tamsulosin
MOA: It is an alpha blocker that works by blocking adrenergic in prostate, urethra, bladder neck. when these receptors in these areas are blocked, the smooth muscle relaxes & allows urine to flow freely.
Use: It is used to treat enlarged prostate gland in males.
ADR: Hypotension, dizziness, drowsiness, reduced eye dose (blurred), inability to get an erection (impotence)

- 6- Inj. Optimax** - 1 Amp
class: vitamin supplement
Generic name: Thiamine (vit B₁)
MOA: It is a nutritional supplement & helps to improve the level of vit B₁₂ in body. It is essential in formation of red blood cells & helps in absorption of iron in body. As a result haemoglobin level increases.
ADR: diarrhoea, flatulence, headache, nausea, sleepiness, upset stomach.

7. Syp. Duphalac - 30ml

generic name: Lactulose

class: Laxatives

MOA: It works by increasing the amount of water & stool bulk base in the bowel, promoting normal bowel activity.

USE: It is used to treat chronic constipation.

ADE: gas, bloating, burping, stomach pain, nausea, cramps.

8. Syp. Aconyl - 10ml

generic name: Terbutaline

class: Bronchodilator

MOA: This works by thinning the mucus in the nose, windpipe & lungs by making it easier to cough out. It works by blocking a certain natural substance known as "histamine" that body makes during an allergic rxn.

USE: used to treat cough with mucus.

ADE: nausea, vomiting, diarrhoea, upset stomach, allergic rxn, rash, hives, tremor.

9. Tab. Amoxilav - 625mg

generic name: Penicillin Amoxicillin

class: Penicillin

MOA: It works by stopping the growth of bacteria, used to treat a wide variety of bacterial infections.

ADE: N, V, D, diarrhoea, stomach pain, skin rash, white patches in mouth.

Drug Interactions:

Drug Interactions:

Sp - Moderate drug interaction ?

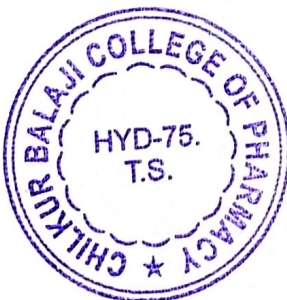

- Tab. Dystorplus \leftrightarrow Lactulose (Syp. Duphalac)

effect: combining these medications for prolonged period may increase the risk of dehydration & electrolyte imbalance.

Food Interactions:

i) Levetiracetam + alcohol \rightarrow alcohol increases the nervous system side effects of levetiracetam such as dizziness, drowsiness & difficulty.

ii) Atonax + grapefruit juice \rightarrow G-F can increase the blood levels of Atonax. This can increase the risk of SE such as liver damage & thrombocytopenia.

Hi Sruthi,
Pl find my feedback

"Thank you for hosting a wonderful webinar session. I wanted to thank you very much for your excellent management of what has turned out to be a successful and highly stimulating Webinar. Such a Webinar involves enormous amounts of time and energy – you must have been working so hard lately for everything to fall into place as it has. It was my pleasure to be there and to share the thoughts with a group of outstanding academicians and young students. Your webinar has been a great success in all possible respects. I hope you continue the series and I wish you all the best with that."

Determination of Blood Pressure...

Aim: To determine Blood Pressure (BP) using a sphygmomanometer and stethoscope.

Principle: Blood pressure is the hydrostatic pressure exerted by blood on the walls of the blood vessels. It is determined by cardiac output, blood volume and vascular resistance.

Sphygmomanometer: is an instrument exclusively used for determination of blood pressure in arteries. Produced by left ventricle at the time of contraction (systole) and the pressure remaining in the arteries produced by the ventricle in a state of relaxation.

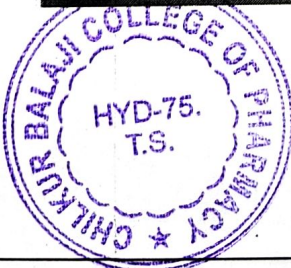

Procedure: In this technique, wrap of the cuff around the arm and then inflate. Close the air through the air pump. till the pressure in the cuff overcomes the arterial pressure existing in compressed so that blood flow through artery ceases. Then place the stethoscope below the cuff. slowly release the pressure by deflating the cuff. when the cuff is deflated enough the first sound heard is known as first sound or systolic pressure. The disappearance of sound corresponds to diastolic pressure.

Normal Pressure of adult individual is 120mmHg systolic and 80mmHg diastolic and is expressed as 120/80mmHg.

Procedures:

1. **Palpatory Method:**
 - a. Ensure the level of mercury is at zero mark in sphygmomanometer before the initiation of the process.
 - b. Expose the arm upto shoulder, wrap the cuff of the sphygmomanometer around the middle arm in such a way that the lower edge of the cuff remains at a minimum distance of 4cm above the cubital fossa.
 - c. Palpate the radial artery at the wrist by placing the middle 3 fingers over it.

Vertical contraction) ion combination of deflation of cuff (release of air) suddenly the sound becomes faint and then corresponds to the diastolic pressure. (Pressure exerted by the blood on arteria during ventricular relaxation) appearance of sound during systole and diastole is called as Korotkoff sound. Coined after Dr. Nikolai Korotkoff a Russian Physician who described them in 1905. The difference between systolic and diastolic pressure is called as Pulse Pressure.

HYDERABAD - 500 075.

Hold the rubber bulb in the other hand in a such a way that your thumb and index finger remain free to manipulate the leak valve screws.
Lower the Pressure of the mercury manometer by repeatedly compressing the rubber bulb and continue to feel the radial Pulse at the same time. Note the level of mercury in manometer at which pulse disappears this gives Systolic Pressure.
Raise the Mercury column upto 30mmHg above the point of disappearance of the Pressure.
Reduce the Pressure gradually by 2.3mmHg/sec. Note the mercury level at which pulse reappear.
Decrease the Pressure to zero mark.

Advantages:
Without stethoscope blood Pressure can be recorded.
It is not time consuming.

Disadvantages:
Only suitable for recording of systolic Pressure reading.
The systolic Pressure is nearly 8.5mmHg less than the actual Pressure.

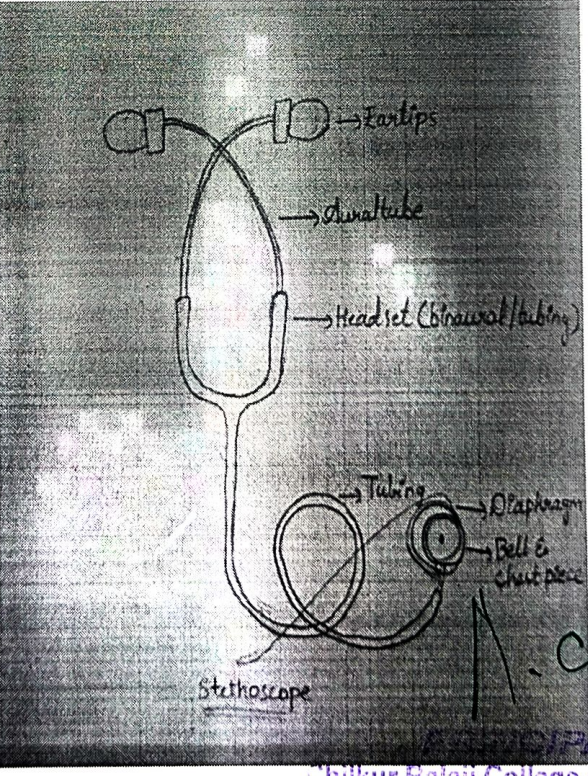

Palpatory Method:

- Inflate the levels of mercury up to zero mark in sphygmomanometer before initiation of the Process.
- Expose the arm upto shoulder, wrap the cuff of sphygmomanometer around the middle arm in such a way that lower edge of the cuff situated at a minimum distance of 2 inch above the cubital fossa.
- Palpate the radial artery at the wrist by placing the middle 3 fingers over it.
- Hold the rubber bulb in the other hand in such a way that your thumb and index finger remain free to manipulate the leak valve screw.
- Raise the Pressure 30mmHg above the Palpatory level at which radial pulse disappears.
- Place the diaphragm of the stethoscope on the brachial artery (Medial side of biceps brachial muscle).
- Lower the Pressure at a rate of 2.3mmHg/sec and listen to the appearance of sound and note the level of mercury. It gives Systolic blood Pressure.
- Slowly keep on releasing the Pressure. The change in sound level which give diastolic blood Pressure then half the level of mercury.

Clinical Significance:

Hypertension: sustained increase in blood Pressure above normal level. mainly arterial Pressure.
Hypotension: a fall in blood Pressure below normal. mainly arterial Pressure is called hypotension.
Age: blood Pressure increases with age.
Exercise: blood Pressure increases with exercise. So, we try to meet the demand of oxygen.
Smoking: we must know to have high blood Pressure.
Excess salt intake with food (NaCl - table salt) increases blood Pressure. like adrenaline, nor adrenaline, antidiuretic hormone, angiotensin II, aldosterone etc.
Diabetes, obesity, arteriosclerosis, hyper lipoproteinemia are the major disorders due to which blood Pressure increases.
Pheochromocytoma: tumour of adrenal gland - responsible for continue release of adrenaline and non-adrenaline.

Report:
The blood Pressure found to be _____ mmHg.

INNOVATIVE LEARNING

Innovative learning methods are implemented to improve the student engagement and involvement.

Project Based Learning:

At the end of final semester of the B Pharmacy Students, V Year Pharm D students and M.Pharmacy II year students are well trained for their project work. Students are involved in their experimental methodology, analysis of results and made a conclusion about the projects. Faculty members are available during their project time to guide and encourage them through the project

MEMORANDUM OF UNDERSTANDING

This memorandum of understanding is made on 27-10-2021
between
Century Hospitals, Banjara Hills, Hyderabad which is represented by its Medical Director
herein named as party one
and
Chilkur Balaji College of Pharmacy, Aziz Nagar (V), Moinabad (M), Hyderabad
represented by its Principal herein named as party two.

The parties hitherto agree as follows:

1. Party one declares that Century Hospitals, Banjara Hills, Hyderabad 300 bedded hospital with a minimum of 120 beds for General Medicine Department.
2. Party one agrees to provide to party two the minimum space necessary of 1200 square feet in the hospital building to establish Pharmacy Practice department for the conduct of Pharm.D programs.
